Color Your Own Queen!

The queen is the monarch's cousin — darker wings, sprinkled with white spots.

Meet the Queen!

1. **Queens and monarchs are cousins, and they both grow up on milkweed.**
2. **A queen is a deeper reddish-brown than a monarch, with white spots sprinkled all over her wings.**
3. **Queen caterpillars have THREE pairs of wiggly feelers; monarchs have two.**
4. **In warm Florida, queens raise families all year long — no long migration trip for them!**

In the garden

Host plant: native milkweed. Favorite nectar: mistflower. Plant milkweed and queens will find it.
